VENTURES

Possible.

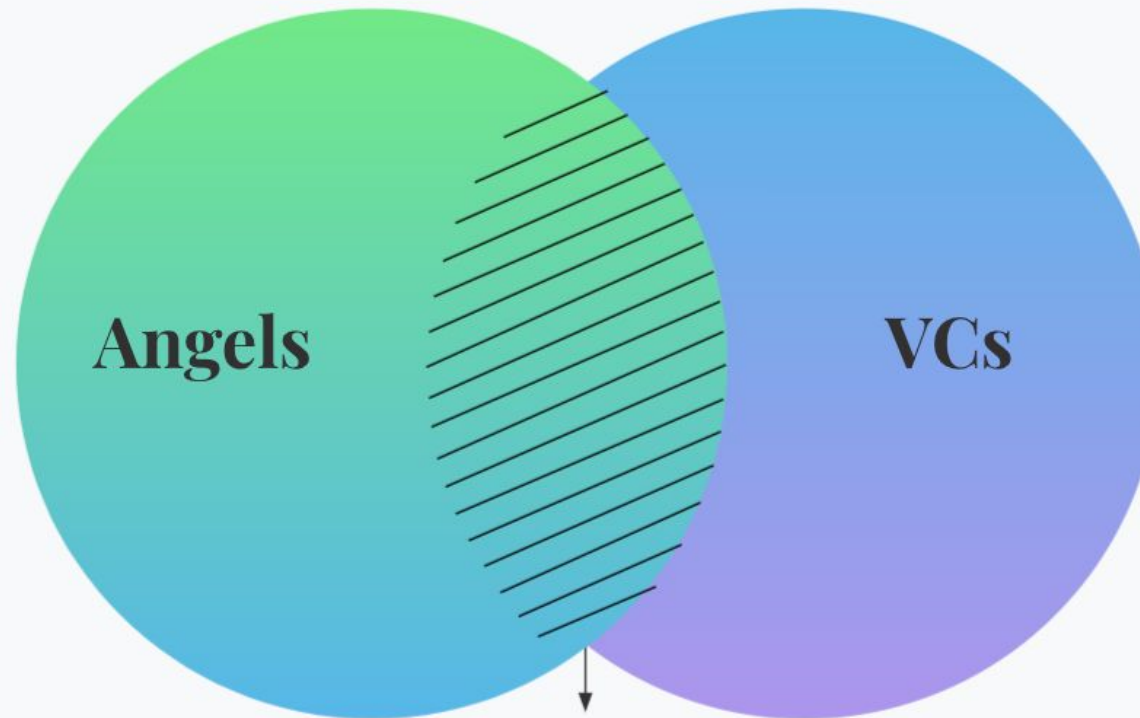

We back mission-driven teams using frontier tech to solve big problems

Possible.

We invest with the heart & soul of angels, but the scale and efficiency of a fund

Strong “operator angels” have the best access in the early stages, but struggle to scale and can’t deploy enough capital for leading absolute returns →

← VCs must invest more capital to generate returns but face massive competition to reach ownership targets, plus adverse selection when the best founders prefer brand name (typically US) VCs

Our model combines **access** and **scale** to yield superior relative *and* absolute returns

After more than a decade’s experience investing as **angels** and **VCs**, we have developed a model that combines the best of both worlds
